

TK- Epoxy Aggregate System

Hi-Tech Clear Epoxy Color Quartz Aggregate System.

- First a shot blasted, properly ground, or acid etched surface to a texture of 50 grit sand paper.

-Second have all the tools necessary to have a successful job.

Applying first coat of epoxy, having a uniform film is important.

Applying aggregate

Spreading out epoxy for second coat, than back rolling making sure it is even.

Spreading out Epoxy A Squeegee is best, but a trowel works well in tight quarters.

Back rolling in both directions to be sure it is even.

Applying Second coat of aggregate.

Applying Third and Top Coat of Epoxy and Back Rolling.

Finished Product – A 1/8" tough durable Aggregate filled Coating
